SmartView

Matrix iQ
CONNECTING TECHNOLOGY WITH INTELLIGENCE

Finally, an easy way to measure the impact driver behaviour has on your claims, emissions and fleet performance.

Improving the behaviour of your drivers has massive benefits. But, with your fleet performance data often held in multiple silos, comparing metrics and demonstrating the ROI of improvements is a huge challenge.

SmartView is your new mission control, ingesting data from over 50 sources to give you a clear view of the impact your drivers are having on your bottom line.

How does it work?

To accurately measure the impact driver behaviour has on fleet performance, you need a consistent set of inputs. SmartView is powered by our unique telematics data aggregation tool which processes and standardises driver behaviour data from your existing kit, regardless of the number of different telematics devices you have.

This is then applied against your fleet performance data to illustrate the impact the behaviour of your drivers is having on everything from your fleet emissions to claims costs.

C Fuel Costs
D Claims Costs
B SMR Data
E Tachograph Data
A ESG Data
F Licence Checks

ESG Data
View the impact your drivers are having on fleet emissions and fuel wastage

SMR Data
Measure how SMR costs change with driving behaviour

Fuel Costs
Calculate fuel and cost savings, and identify drivers with an above average spend

Claims Costs
Analyse the impact speeding and poor driving are having on your claims costs

Tachograph Data
Access an overview of your most common driving infringements

Licence Checks
View a complete breakdown of your drivers' licence endorsements

Benefits

1

No more spreadsheets and manual analysis

Forget combining info from your accounts, HR, insurance and fleet teams to get the data you need. Focus on driving improvements with automated reports using data synced via API from your current providers.

2

Objective, easy to demonstrate ROI

Even if you've been in fleet 20 years, coming up with an objective measure for the impact behaviour has on claims, fuel usage, SMR costs and emissions is a significant task. We've developed a unique algorithm using data from millions of vehicles, so you don't have to.

3

100% agnostic, single source of truth

SmartView is designed to make your life easier. If you need new telematics or pointing in the direction of one of our claims data partners, we can definitely help, but we can also pull data from your existing fuel card supplier, SMR service provider and claims partner so you can continue working with whoever offers you the best service.

4

Identify which risk management techniques have the greatest impact

In a perfect world, it'd be great to implement every risk reduction technique in the book but your time is limited, so you need to be able to quickly measure what is working. SmartView offers you a complete overview of how what you are doing impacts all of the most important measures of fleet performance, in one place.

5

Automated fleet carbon reporting

SmartView combines vehicle efficiency data with your telematics output to offer you live insight into carbon emissions from your fleet. Once benchmarked, this can be used to monitor improvements and report on decarbonisation progress.
